

SSMS Product Brochure

A modern school fee operations platform for schools that need branch-aware billing, practical collection workflows, and parent-facing vouchers.

Product snapshot

- Current fee platform is approximately 97% complete
- Current focus is release QA, practical office polish, and a few remaining convenience workflows.

What schools can do today

- Sign up, create a school workspace, and open the first branch
- Invite staff and control access by role, module, and branch
- Create sessions, classes, sections, and searchable student records
- Import students in bulk with a downloadable CSV sample file
- Assign student billing profiles with tuition, annual, admission, custom fees, and line-level discounts
- Generate vouchers for one student, one class, one branch, or broader school runs
- Print vouchers in parent-facing format with school logo, bank details, and arrears breakdown
- Collect full or partial payments and issue receipts
- Review ledgers, defaulters, branch reports, payment reports, and reconciliation support

Daily office workflow

- School onboarding and first branch setup
- Staff assignment and branch access control
- Academics and student admission setup
- Student billing profile setup and special discounts where needed
- Voucher generation, printing, and distribution
- Front-desk or accountant payment posting
- Receipt printing, ledgers, defaulters, and branch-level reporting

Role model

- Super Admin: platform owner controls for schools, subscriptions, exports, support, and audit
- Admin: full school control including setup, staff, students, billing, vouchers, payments, and settings
- Accountant: fee setup, vouchers, concessions, collection review, deposits, and finance reporting
- Collector: branch-scoped payment posting and receipt operations
- Moderator: student and academic maintenance without finance-critical access
- Viewer: read-only access where the school permits it

Bulk and reporting strengths

- Bulk student import
- Bulk voucher generation
- Bulk voucher print and receipt print
- Server-side filters, sorting, and pagination across operational lists
- Student ledger, defaulter list, class-wise and branch-wise visibility
- Deposit batches and bank statement import support for reconciliation flows

Platform owner controls

- View and manage all schools from the platform dashboard
- Track subscriptions and school lifecycle status
- Suspend or restore access at school level
- Store support notes and audit activity
- Prepare exports and operational oversight for support cases

What comes next

After release QA and final office-polish items, the next expansion areas are parent portal, diaries, circulars, announcements, timetable, transport management, and broader school ERP modules.
